

## Breedon Cement Quality Policy

It is the policy of Breedon Cement to produce cement, which fully conforms with our customers' needs and expectations and is at all times compliant with the relevant National and European Standards for cement manufacture.

In order to provide a management structure that ensures the product continually meets these requirements, the Company maintains a Quality Management System in accordance with EN ISO 9001- 2015

Central to the operation of this Quality System is the understanding that all Breedon Cement operations are processes which can be measured, analysed and continuously improved.

The Company recognises that the quality awareness of personnel is essential to the efficient implementation of the quality system and to this end, it provides all the necessary training to ensure that they can carry out their tasks effectively. Similarly, it is the obligation of all personnel to familiarise themselves with the content of the Quality Manual and relevant procedures and comply with these to the best of their ability.

This Quality policy is maintained as an integral part of Breedon Cement's operational strategy and performance and suitability of quality objectives and targets are reviewed at regular management review meetings. Success is achieved by fully utilising the abilities, dedication, and engaged participation of all employees.

The Quality Manager is responsible for the day-to-day implementation of the quality system at the cement works and ensuring that consistent quality product is achieved at all times.

The ultimate responsibility for product quality and customer satisfaction rests with the Works Manager. He provides the necessary management authority to key personnel responsible for achieving that objective and resolves any difficulties in the operation of the Quality System.
